

Plan, design and present the future of your city. **On one secure platform.**

Giraffe puts policy, data and outcomes in one spatial model, so councils can test scenarios, visualise plans, assess proposals and bring communities into the conversation.

01 A core platform used by hundreds of local governments

Giraffe is used by hundreds of local governments around the world. The core platform brings together planning, design and presentation tools on a live 3D model with thousands of data layers. That makes it well suited to the work councils do every day:

Strategic planning

Precinct studies

Assessment of schemes

Economic studies

02 Useful out of the box. Grows in any direction.

What makes Giraffe different is a growing suite of apps, built by Giraffe and by a network of third-party developers. Councils can also build their own apps, with or without Giraffe's support. So Giraffe does the job on day one, and grows with whatever your council needs next. Apps available to local government today include:

STRATEGIC PLANNING

gPlan

Model growth scenarios, land supply and yield across a whole local government area.

URBAN PLANNING

Urban Planning Toolkit

A set of workflows from urban planners, from view analysis to light analysis.

COMMUNITY

Engage

Share the live plan with your community and gather feedback on it.

03 Secure, certified and ready for government

Giraffe is a secure, ISO 27001 certified platform for local government. It is also SOC 2 Type II certified, built on Google Cloud Platform, with SSO (SAML or OIDC), audit logs and data residency options for enterprise deployments. It runs in the browser: nothing to install.
